

# teknion community table

---

## a model of simple design, that is about people

### OVERVIEW

---

Designed for Teknion by Michael Vanderbyl, the community table represents an approach to design that is essentially about people, in tune with human needs and modern workstyles based on interaction. A model of simple, straightforward design, substantial proportions give the table sufficient presence to act as a focus for the space, an architectural anchor that invites people to gather and draws them into deeper social and work

interactions. Access to power/data is transparent, provided via a central trough. The dimensions of the table can be customized to meet clients' exact requirements. Minimal and yet warm, this is a well-crafted wood table ideal for the new human-centered workplace, one that references the domestic environment; one that is informal, collegial and collaborative.

### FRAMES

---

- Bar Height
- Pricing by linear foot
- Finishes to include V4s, Flintwoods and specialty finishes
- Electrical Outlets and number of sections determined by linear feet in standard configurations
